

Front End Engineering Design (FEED)

Engineering Peace of Mind

Front-End Engineering Design (FEED)

Magal's Front-End Engineering Design (FEED) service optimises our conceptual security designs.

We carefully plan all civil works, construction and earth works, providing our clients with peace of mind, assuring them that their investment is in safe hands.

At Magal, we adhere to the highest international engineering and quality assurance standards. Magal has completed front end engineering design projects for some of the biggest oil and gas terminals in the world.

We believe that communication is key to successful execution and we work closely with our clients throughout the entire project lifecycle, ensuring that their needs are met at every stage. Our multi-disciplinary approach to engineering ensures that every project we undertake is handled by qualified, professional engineers who are experienced in working within the oil and gas sector internationally.

HSSE

Health, Safety, Security and Environment

Magal Oil and Gas is committed to providing a safe and secure working environment to all employees, contractors and stakeholders.

HSSE is one of our central pillars. We make it our priority to ensure that physical and environmental risks are kept to a minimum.

Our Health, Safety, Security and Environmental (HSSE) policy and procedures ensure that any safety issues are identified, assessed and managed appropriately, using robust processes.

We believe that all workplace injuries and environmental incidents are avoidable by protecting the health of our workers and the environments in which they operate. We encourage all employees to follow our control programmes and processes in every instance.

Our health and safety management systems encourage employees to act in accordance with all applicable HSSE laws, regulations and standards. We make every effort to communicate our policy to all staff to ensure that everyone understands their responsibilities and accountabilities.

With every oil and gas project that we undertake, we identify HSSE risks well ahead of work commencing. We provide full training to our personnel and ensure that they are competent to perform the allocated work safely and without risk to personnel and the environment.

To meet the objectives outlined in our policy, we ensure that employees have all the necessary resources to carry out their work safely and securely. We conduct regular policy reviews, publish periodic reports on our HSSE performance and implement audits of our safety management systems.
