NOBLE

Subtec Pro is an independent subsea engineering company.

We are a team of experienced, professional engineers and project managers. We take an invested interest in the success of our clients' drilling projects, matching our skills with their project needs. All of our personnel have held long-standing core crew positions at senior levels, within the subsea sector.

REDUCING DOWNTIME, INCREASING PRODUCTIVITY

At Subtec Pro, our priority is keeping project time and downtime to a minimum. We understand the repercussions that downtime can have on drilling operations, not to mention a company's reputation. As a motivated team with over 40 years' combined experience in engineering, we have the skills and the insights to deliver projects to exact requirements. Our subsea project managers can oversee the entire project lifecycle, using a carefully-planned, yet flexible approach that ensures every possible outcome is accounted for.

HIGHLY-SKILLED ENGINEERS FOR EVERY PROJECT NEED

We provide access to highly-skilled engineers who improve the efficiency of subsea drilling projects. Our contractors integrate seamlessly into core crews, providing expertise that ensure projects are completed on time and within budget.

All of our team have the experience and skills to work completely unsupervised, freeing up core crew to focus on other operations. Our engineers have completed rigorous OIM and Wellstop training as well as years of on the job experience.

SAFETY-FOCUSED FOR FULL COMPLIANCE

The safety and wellbeing of subsea personnel is of upmost importance. We are ISO 9001 certified and our OHSE policy reserves and complies with all relevant legislation and regulations. We make sure that all personnel have the necessary training, supervision and information to carry out their work safely, while meeting project requirements.

We promote a work culture that meets health and safety regulations through safe behaviour, environmental awareness and careful planning. On projects where no safety culture exists, we create one. All work is risk assessed and we ensure that Permit to Work (PTW) procedures are followed at all times, without exception.

Find out more about how our engineers can enhance project productivity while keeping downtime to a minimum.

WHAT OUR CLIENTS SAY...

"I have personally worked with most of your employees who are either senior subsea or subsea supervisors/engineers who have been trained by the industry's leading contractors. They are all extremely competent engineers with a high regard for our safety culture. They are fast workers who get on well with others, are able to work as part of a team or to successfully execute tasks on their own. The high calibre of engineering is why Subtec Pro is the first choice when we require extra resources for BOP or projects"

Mark Swales, Head Support Superintendent, Seadrill

"I have recently worked with Subtec Pro and would highly recommend this company for any future subsea work. The incident supplied to us with safety conscious knowledge and provided an excellent report and assistance for review. Between both work scopes. These guys have many years offshore experience in the subsea department and I will ensure we use them again"

Greg McManus, Technical Subsea Superintendent, Seadrill

"I have just been working with the team from Subtec Pro in Canada on a Seadrill rig. They are a great bunch of guys and are very experienced I would recommend them to any rig. They helped us out a lot in delivering the BOP early to the client. Great result and no down time even though we had a lot more work than we had planned for the BOP. Thanks for all the experience and knowledge you brought to the table. Look forward to seeing you again in the near future."

David Brown, Subsea Engineer, Seadrill

"If you are looking for a company that has excellent experience, awesome efficiency and great safety work abilities then look no further. Subtec Pro Ltd recently worked with us on the WAO and if I could give the 10 stars I would. When you hire these guys, you won't even think about hiring anyone else because these guys are the best in the business."

Mike Doyle, Subsea Engineer, Shell

"We have used Subtec Pro for management support during our Between Well Maintenance and they performed have always been knowledgeable, experienced and worked hard with little supervision request allowing us to meet our deadlines. We would use them again without hesitation."

Paul Evans, Senior Subsea Supervisor, Wood Group

"Crews consist of technicians with senior level (over 10 year) experience who participate in the maintenance activities with a sense of ownership and scope awareness you won't always get with 'third party' labor contractors. Expect that Subtec Pro technicians will carry out work in conformance with your company's policies and procedures and use the in-house safety tools to complete the job safely and efficiently. Self-motivated team who will work independently on assigned tasks. Highly recommended."

Bill Walsh, Head of well services, Wood Group

OPERATIONAL SUBSEA SUPPORT

Our operational support is focused on meeting the individual challenges presented by subsea departments.

We can handle all project operations, including offshore campaign planning, troubleshooting and diagnostics, full end-of-well work scopes and spares strategies. We also provide verification that our engineers are fully competent to perform their duties.

VENDOR SURVEILLANCE

Vendor surveillance is crucial to a project's operational success.

At Subtec Pro, we ensure that all equipment that passes through a vendor's site is verified and fit for purpose. We ensure that equipment is fully-operational and that no downtime will occur from its use.

We provide daily reports on the status of equipment, creating a work history that reassures personnel when used in the field. Our surveillance also ensures that all work carried out by the Original Equipment Manufacturer (OEM) is of the highest level. In short, we provide a 'plug and play' service that saves time and money on the rig.
